RaceHub Version 4.0

Version 4.0.3

Released: February 13th, 2025

New or changed functionality

RaceHub

Area	Description	ID
Game setup	Support for the data available in Assetto Corsa EVO. Supported LED features: • Pit limiter • ABS / Lockup • TC Activation Supported display features: • ABS / Lockup • TC Activation • Speed • Gear • RPM • Fuel (At the time of our release, the game only provides a static value) • Brake bias • Tire temperature • Brake temperature • Tire pressure	2773

Steering Wheel

Area	Description	ID
Display	When SimHub is set as the display layout the display will use SimHub's idle behavior. Asetek's idle screen is no longer available when the SimHub layout is selected.	2748

Miscellaneous	SimHub can now show game data for games RaceHub doesn't support. This feature can prevent the steering wheel from using RaceHub's idle effects.	2821

Pedals

Area	Description	ID
Miscellaneous	Support for THORP II brake.	2679

Bug fixes

Area	Description	ID
Shift light	The optimal shift point sound now works without opening the shift light page in RaceHub.	2818
Pedals	Fixed a bug where the pedal calibration wasn't saved if the pedals were disconnected, or the PC was closed within a minute after the calibration.	2872
Game setup	Fixed an issue where the latest Assetto Corsa update caused the game data to stop working for our devices.	2878

Version 4.0.2

Released: December 18th, 2024

Bug fixes

Area	Description	ID
Miscellaneous	Fixed a bug in the RaceHub Service that caused excessive CPU usage. The RaceHub Service is no longer visible in Task View / Task Switcher.	2794

Version 4.0.1

Released: December 17th, 2024

New or changed functionality

Steering Wheel

Area	Description	ID
Display	Display support for more cars in Assetto Corsa.	2773

Bug fixes

Area	Description	ID
Miscellaneous	RaceHub had a memory leak that could increase the software's memory usage over time.	2597
Pedals	A phantom clutch could appear even though no clutch was connected.	2749
Pedals	The pedal calibration was sometimes not closed when completed.	2734 2703
Pedals and Steering Wheel	Improved the pedals and steering wheel import functionality. Sometimes the imported profile wasn't shown in the UI before the page was updated.	2707
Steering Wheel	Some idle mode effects on the steering wheel didn't turn off the LEDs as they should.	-

Version 4.0.0

Released: June 21st, 2024

New or changed functionality

Wheelbase

Area	Description	ID
Torque	Increased max value on damping, friction, inertia, and cornering force assist. This allows you to add more of each effect if desired. *Please note that your old values might have been changed. This ensures the wheelbase feeling doesn't change with the update.*	-

Torque	Increase resolution on the inertia, cornering force assist, and anti-oscillation sliders. This allows you to adjust the effect more precisely, moreover, the design aligns with the damping and friction sliders. *Please note that your old values might have been changed. This ensures the wheelbase feeling doesn't change with the update.*	2620

RaceHub

Area	Description	ID
Steering Wheel	Support for Invicta steering wheel including 3 new dash layouts with support for different units.	576 1874 2300
Steering Wheel	Support for SimHub. - Layouts – requires Asetek SimSports Invicta steering wheel. - Flag lights - Shift light *Please note that you'll need SimHub version 9.5.0 or newer to use this feature.*	1441
Miscellaneous	Smaller user interface improvements.	2413 2621
Miscellaneous	Performance improvements.	-

Bug fixes

Area	Description	ID
Torque	Cornering Force Assist has little or no effect in the games. Therefore, the maximum value has been increased giving you more possibilities to feel the setting. *Please note that your old Cornering Force Assist value might have been changed. This is to ensure that the wheelbase feeling doesn't change.*	2307
Torque	Fixed how the basic/advanced toggle works.	2414
Shift Lights	Fixed an issue where shift lights didn't work as they should while playing iRacing.	2687 2702
Miscellaneous	USB communication optimizations.	2302

Miscellaneous	Fixed an issue where the pedal profile import didn't import all the settings.	2686
Miscellaneous	Fixed an issue where the steering wheel profile import wasn't loaded properly.	2700 2357
Miscellaneous	Fixed an issue where you, in rare cases, couldn't save your wheelbase settings.	2627
